

MyLoo

for patient advocates and gut-health creators

"Photo in, AI classifies, clinic PDF out. Privacy-first. Earn from the value you already create."

You replied, thank you. This playbook is everything you need to decide whether this is a fit for you, and if so, how to get to real conversions with minimum friction.

Contents: 1. App in 60 seconds · 2. Audience fit · 3. Reel hooks · 4. Stories + carousels · 5. Posting cadence · 6. Conversion math · 7. Tracking model · 8. Onboarding · 9. Dashboard · 10. Brand assets · 11. FAQ · 12. Next steps

1. App in 60 seconds + business model

MyLoo is a digestion / stool tracker for iOS (Android launch on hold due to Google's Health Policy 2026). Photo of the sample, Claude Vision AI classifies on the Bristol Stool Scale 1-7, plus volume / texture / blood / mucus flags. Privacy-first: photos are NOT stored on our side, only the structured result lives in the timeline. The timeline carries symptom tags (bloating, cramps, urgency, pain level), you export a clean 30-day PDF for your GI appointment.

Why this works

Word-doc tracking is the reality for 80% of IBS patients. MyLoo solves exactly that problem: at the GI appointment you no longer talk retrospectively for 4 weeks, you show a PDF with real data.

Free vs Premium

- Free: manual entry (Bristol picker + tags), timeline, manual PDF export.
- Premium (4.99 USD/month or 29.99 USD/year): AI photo classification + email-inbound scanning + extended clinic export mode.
- Email scanning mode: off / warranty-only / all - controls what MyLoo automatically parses from your mail inbox.
- Free Lifetime Premium for onboarded affiliates (no posting obligation).

2. Audience fit (does your audience match?)

Works well for

- Patient advocates IBS/IBD (IG, 10k-80k, very high conversion).
- Patient advocates DACH #reizdarm (IG / TikTok, 5k-50k, high reply rate, smaller market).
- Low-FODMAP recipe creators (IG / TikTok, 30k-200k).
- #ibstok TikTok creators (50k-500k, medium-high conversion).
- Spoonie community #invisibleillness (IG, 10k-100k, loyal).

Works poorly for

- Wellness-influencer aesthetic (audience over-promised by other tools).
- Generic lifestyle accounts without a gut-health angle.
- Children's-health audiences - V2, different compliance bracket.

3. Reel hooks that work

Faceless content (privacy by design)

- Screen-recording only "From Word doc to clinic PDF in 2 minutes" - 30s app screen, scroll timeline, photo add, AI classification, export PDF preview.
- Animation Bristol scale 1-7 - 15s animation that ends with "the test your GI would do in 30 seconds, you do it daily".
- Voiceover over stock footage - 45s, stock stomach pain / belly / calendar, voice: "I've had IBS for 8 years, here's what changed my GI appointments."
- Comparison slide "What you did before MyLoo" - split-screen, left: word-doc chaos, right: MyLoo timeline. 8s loop.
- Patient-journey storyboard carousel - 4 slides (Day 1 / Day 14 / Day 30 / appointment 4 min instead of 25).

UGC / your voice (patient-advocate trust)

- "Day in my life with IBS" with MyLoo as a 5-second beat 1x - 60s vlog format.
- "Before my GI appointment I do this" - 45s selfie + app PDF export.
- Personal diagnosis story (90s, high-trust format) - MyLoo appears at the end as "what would have helped me".
- Patient-advocate Q&A story / reel series - "5 questions from my DM audience about MyLoo".
- Co-creation with another patient advocate (duet on TikTok, carousel on IG).

4. Story + carousel ideas

Story ideas

- Education story: Bristol scale infographic + sticker "the only tracking that actually helps your GI" + link sticker.
- Social proof: PDF export screenshot, caption "this is what I hand my GI now, instead of guessing".
- Direct ask: selfie story, "use my link, get 1 month Premium free" + link sticker.

Carousel ideas (IG)

- "5 apps every IBS patient needs" (MyLoo on slide 1 or 2, no hard sell).
- "My GI appointment routine in 5 slides" (slide 6 = affiliate link in caption).
- "Why I stopped tracking in a Word doc" (problem-to-solution carousel).

5. Posting cadence + best times

Patient-advocate audience: 1 high-trust reel per week is plenty, more is fine but not required. Best engagement IG: Tue + Thu 7-9pm CET. TikTok: Mon-Wed evenings work best for educational gut-health content. Always pair a reel with a 24-hour story including the link sticker - that brings ~40% of the conversions.

6. Conversion math (why this pays)

Micro patient advocate (15k IG, 1 reel): $8,000 \text{ views} \times 1.8\% \text{ CTR} = 144 \text{ clicks}$, $35\% \text{ install} = 50 \text{ installs}$, $8\% \text{ Premium} = 4 \text{ subs}$, $14 \text{ months} \times 4.99 \text{ USD} \times 50\% = \sim 140 \text{ USD per reel}$. Mid-tier patient advocate (80k, 1 reel): $40,000 \text{ views} \times 1.5\% \text{ CTR} = 600 \text{ clicks}$, $30\% \text{ install} = 180 \text{ installs}$, $8\% \text{ conv} = 14 \text{ subs}$, $\sim 490 \text{ USD per reel}$. MD/RD endorsement (300k, 1 carousel): $\text{reach } 100,000 \times 0.8\% \text{ CTR} = 800 \text{ clicks}$, $25\% \text{ install} = 200 \text{ installs}$, $9\% \text{ conv} = 18 \text{ subs}$, $\sim 625 \text{ USD per post}$. IBS apps have above-average conversion because the alternative (Word doc / nothing) is genuinely bad.

7. Tracking model (how it is counted)

- Your link [myloo.org/i/\[yourhandle\]](https://myloo.org/i/[yourhandle]) works on IG bio, TikTok bio, story sticker, carousel caption.
- Android: Google Play install referrer (deterministic) - once Android is unblocked.
- iOS warm: Universal Link opens the app with handle.
- iOS cold (~99% of creator traffic): signed-token clipboard deferred-deeplink, end-to-end verified via Wavelength.
- Privacy add-on: on first open the user sees a one-tap "Invited by @[yourhandle]? Yes / No" confirmer - consent over silent attribution. Most confirm immediately.
- RevenueCat webhook fires on Premium purchase, 50% credited for 24 months.

8. Onboarding (5 minutes)

- Click the personal link from Mail 2 (valid 7 days).
- Land on [myloo.org/affiliate/\[your-token\]](https://myloo.org/affiliate/[your-token]).
- Fill in: handle, Wise payout details, country (tax docs), billing address.
- Free Lifetime Premium activated immediately on your MyLoo account.
- Dashboard at getklar.org/dashboard via magic link.

9. Dashboard (what you see)

- Clicks per day / week / month.
- Installs split (Android / iOS-warm / iOS-cold) once channels are open.
- Active Premium subs in your bucket.
- Claimable + paid + carry-over + next payout date + refund holdback pipeline.

10. Brand assets (download)

Logo, app screenshots, Bristol-scale infographics, B-roll footage and ready-made caption snippets: getklar.org/i/myloo/brand-assets (link goes live with your onboarding mail).

11. FAQ

Privacy-first - can I honestly say this?

Yes. Photos are NOT stored on our side. Only the structured result (Bristol classification, tags) lives in the timeline. Vision call runs in the EU edge function, photo is processed and not persisted.

Medical claims?

NEVER. MyLoo is a tracking tool, not a diagnostic device. Do not say "the app diagnoses IBS", say "the app helps you track symptoms structurally for GI conversations". Violation = legal risk for you and us.

Disclosure duty?

Yes. Rev-share = paid recommendation. #ad / #sponsored / IG "Paid Partnership". DACH: UWG §5a disclosure mandatory.

Can I get a flat fee on top?

Mid+ yes, 200-500 USD per reel negotiable. Book the 15-minute intro call.

Can I also mention MyLoo for kids / babies?

Not currently. Children's health is V2 phase, different compliance bracket. Please target adult audiences only.

What if Premium pricing changes?

You continue to earn 50% on the then-current price.

12. Next steps

- Questions? Reply directly to Mail 2.
- Want to start? Click the onboarding link from Mail 2, invest 5 minutes, you are live.
- 15-minute intro call? Book a slot via <https://cal.getklar.org/alain/affiliate-intro> (Cal.com). We walk through tracking / payout / content ideas if you want to clarify before onboarding.
