

MyLoo

Privacy-first digestion tracker with AI Bristol classification and 30-day clinic export.

What it is

MyLoo is a digestion and stool tracker for iOS (Android launch on hold due to Google's Health Policy 2026). Photo of the sample, Claude Vision AI classifies on the Bristol Stool Scale 1-7, plus volume / texture / blood / mucus flags. Privacy-first: photos are NOT stored on our side, only the structured result lives in the timeline. The timeline carries symptom tags (bloating, cramps, urgency, pain level), and the user exports a clean 30-day PDF for their GI appointment.

Who it is for

Adults dealing with IBS, IBD, gut sensitivities, food intolerances, post-surgical follow-up. Plus parents tracking toddler health (adult-audience targeting only for now), and chronic-condition patients (coeliac etc.). Creators who sit well: gut-health educators, IBS-day-in-the-life accounts, low-FODMAP food channels, post-gastro-surgery journals, patient-advocate IBS/IBD pages.

Key features

- Photo-to-Bristol AI classification: Vision model returns Bristol 1-7 + volume / texture / blood / mucus flags from a single photo.
- Privacy-first photo handling: image is processed in the Vision call and not persisted on Klar infrastructure, only the structured result lives in the timeline.
- Symptom tags timeline: bloating, cramps, urgency, pain level on a simple scale, cross-tagged with food entries.
- 30-day clinic PDF export: handed to GI at appointment, replaces 4 weeks of retrospective recall.
- Email-inbound parsing mode (Premium): off / warranty-only / all - parses incoming lab or food-sensitivity test PDFs into the timeline.
- Discreet clinical UI: deliberately calm visual identity, not the wellness-influencer aesthetic that drives away patients with real conditions.

Business model

- Single revenue stream: recurring Premium subscription.
- Pricing: 4.99 USD / month or 29.99 USD / year.
- Free tier: manual Bristol entry + tags, timeline, manual PDF export.
- Premium unlocks: AI photo classification, email-inbound scanning, extended clinic export mode.
- Platform note: iOS only currently. Android paused since Jan 2026 - Google Health Policy now requires registered org account + D-U-N-S verification, personal accounts are blocked at policy review.

Affiliate compensation

- 50% of net Premium subscription revenue for 24 months from each attributed user's first paid month.
- 30-day refund holdback before payout becomes claimable (Apple / Google refund window).
- 50 EUR minimum payout, monthly, via Wise.
- Free Lifetime Premium for onboarded affiliates (no posting obligation).
- Per-handle dashboard with live click/install/sub/earning split, no agency layer.

Why this works as an affiliate pitch

Gut-health content has explosive engagement on TikTok and Instagram, and the audience is genuinely seeking and willing to try new tools. MyLoo's clinical-calm visual identity is a real differentiator from the wellness-influencer aesthetic that dominates the category and feels untrustworthy to people with real conditions. AI Bristol classification is a feature most competitors do not have, which gives creators a concrete demo moment. Word-doc tracking is the reality for ~80% of IBS patients today - MyLoo solves exactly that switch.
