

ThrottleUp

for moto creators and ADV riders - and what the research says about how to pitch it

"VIN scan, recall alerts, multi-bike. Earn from maintenance content you already make."

You replied, thank you. This is the long-form companion to the email. It walks through what the research says about face-on-camera vs faceless content, then breaks down which path fits your creator archetype.

Contents: 1. App + business · 2. UGC vs faceless - what the research says · 3. Creator types table · 4. UGC strategy · 5. Faceless strategy · 6. Audience fit · 7. Cadence · 8. Conversion math · 9. Tracking summary · 10. Onboarding · 11. Dashboard · 12. Brand assets · 13. FAQ · 14. One last thing

1. App + business in 60 seconds

ThrottleUp is an iOS + Android app for motorcycle maintenance tracking. The VIN scanner pulls make / model / year / engine class live from NHTSA vPIC. Recall integration runs against the NHTSA Recalls API. You set service intervals per bike, push reminders fire 30 / 7 / 1 day before due. Multi-bike for 2+-bike garages. Maintenance log with photo attachments, PDF / CSV export, anonymous public trip-sharing with privacy-cropped routes.

Why it sells

The market is empty. RIDEOLGY has 2.2 stars, "Motorcycle Maintenance Log" has 1.9k downloads total. Most riders track in a Word doc or not at all.

Free vs Premium

- Free: 1 bike, 1 riding group up to 4 members, unlimited entries, VIN decode, recall lookup, PDF / CSV export.
- Premium (3.99 USD/m or 24.99 USD/y): unlimited bikes, larger / more riding groups.
- Free Lifetime Premium for onboarded affiliates, no posting obligation.

2. UGC vs faceless - what the research says

Face-on-camera content (UGC) converts higher than faceless content on average. For moto audiences this gap is huge because moto creators trade on authenticity.

Two findings worth knowing. Sokolova and Kefi (2020) showed that parasocial interaction is a strong driver of purchase intent. Moto audiences specifically build trust through visible lived experience - riders follow other riders. Lou and Yuan (2019) found that perceived creator credibility (expertise, trustworthiness) directly increases consumer trust in branded content; for moto content, garage-visibility and a real bike are the credibility signals. Industry data from Influencer Marketing Hub confirms automotive/moto verticals see UGC outperform faceless by wider margins than e-commerce or lifestyle.

The caveat

Faceless still has a real space. Pure how-to content (oil-change tutorials, valve adjustment walkthroughs, VIN-scan demos) work well as faceless screen-rec or hands-only POV. Many of the most-watched moto-maintenance YouTube channels are face-rarely, hands-frequently - the hands and the bike are the personality.

When each path works

UGC fits when YOU are the rider, the builder, the garage-vlogger. Your face and your real bike are the entire brand. Faceless fits when the bike or the procedure is the asset (VIN scan demo, valve check, oil change), or when you post under a brand-style hands-only POV channel.

3. Creator types - which path fits you

Find your row. For moto specifically, authenticity is the entire conversion multiplier - performative or stock-style content converts at near zero in this niche, while a real wrencher with a real bike converts at multiples of the platform average.

Creator type	Primary path	Best hook angles	Realistic conversion
ADV / touring vlogger	UGC strong	VIN scan on your actual bike; recall alert dropped mid-trip; multi-bike garage tour; maintenance log at 50k miles	3-5%, ADV audience trusts other ADV riders
Garage / wrench vlogger	UGC + Faceless mix	Oil change with reminder fire; valve check tutorial; maintenance receipt photo workflow; PDF export at resale	2-4%, wrencher trust is high
Build-thread / custom-builder	UGC + Faceless mix	Maintenance documentation during build; VIN decode reveals; recall lookup on parts bike	2-3%, build-thread audience converts on proof-of-care
Cafe-racer / restomod	UGC	Vintage VIN decode reveal; recall on a 2002 SV650; restomod log carry-over	2-4%, vintage audience values documentation
MotoVlogger (helmet-cam style)	UGC + screen-rec mix	Pre-ride checklist with app reminder; recall alert via push during ride break; multi-bike workflow	1.5-3%, larger audiences but lower per-view conversion
Faceless oil-change / how-to TikTok	Faceless	Silent oil-change tutorial with maintenance-log moment; VIN scan demo top-down; recall lookup time-lapse	1-2% per view, high posting cadence scales

4. UGC strategy (you on camera)

Who this fits

You with your bike. Garage-vlogger in your actual workshop. ADV rider on your actual tour. Wrencher with your actual hands oily. The audience can tell within 2 seconds whether you actually own and ride the bike on screen. Sokolova and Kefi (2020) findings on parasocial trust apply double-strength here: moto audiences follow riders, not aesthetic accounts.

Hook examples that work

- "This VIN scanner just told me about a recall on my 2019 Tracer" - phone in hand at the bike, real reaction.
- "Why I stopped tracking my maintenance in Word" - talking head in the garage, you scrolling the doc, then the app.
- "50,000 miles on this bike - here's the maintenance log" - PDF export reveal, milestone reel.
- "My multi-bike garage walkthrough" - slow pan across 3-4 bikes, app showing the same on screen.
- "Recall just dropped on my second bike - found out from the app first" - push notification screenshot, real bike walk-around.
- "Oil change Saturday" - full process reel, app reminder firing at the start, log entry at the end.
- "Bought this bike with no service history - here's how I'm rebuilding the log" - restoration storyline.
- "Selling this bike with 80,000 miles of documented care" - resale PDF reveal, value-protection angle.

Format templates

- Garage vlog 60-90s: setup -> app demo (10 seconds) -> outcome / wrench work.
- Talking head in the workshop 30s: direct to camera, your honest take, bike in the background.
- Ride-day vlog: helmet-cam -> pre-ride checklist app moment -> ride.
- Build-thread carousel: 8-10 IG slides, every entry has a maintenance-log screenshot.
- Restoration storyline: multi-post arc, app as the doc system.
- Milestone retro: "5 years with this bike", PDF export as the closer.

Do / Don't

- Do: film in your actual garage. Stock garage backgrounds read fake instantly.
- Do: name your bike specifically. "My 2019 Tracer 900GT" beats "my bike".
- Do: include the boring moments. Real wrench work has waiting time - audiences read that as honest

5. Faceless strategy (screen-rec, voiceover, B-roll)

Who this fits

Hands-only POV. Top-down workshop angle. Voiceover-only walkthroughs. Brand-channel garage content. You're behind the camera or above it, the hands and the bike do the work. Many of the most-watched moto-maintenance creators on YouTube and TikTok are face-rarely, hands-frequently - the bike is the personality.

Hook examples that work

- Silent VIN-scan demo - top-down phone scanning a VIN tag, bike emerges in app.
- Oil-change tutorial 60s - hands only, app reminder firing at the start.
- Time-lapse: full service Saturday in 90 seconds with app log entries appearing.
- Recall-lookup demo - silent screen-rec of the recall API result.
- PDF export reveal - top-down on phone screen, full maintenance doc scrolling.
- Comparison: Word-doc-vs-app split-screen, ambient music.
- Garage tour B-roll - slow pan, hands-only interactions with app.
- Build-thread chronology - month-by-month maintenance log time-lapse.

Format templates

- Hands-only POV 60s: workshop work with app interaction beats.
- Top-down phone screen-rec 30s: app feature shown directly.
- Voiceover-only tutorial: bike + hands on screen, your voice teaching.
- Tutorial carousel: 6-8 IG slides, screenshots step-by-step, slide 6-8 = affiliate link.
- Time-lapse: full service compressed into 60-90 seconds.
- Brand-channel: consistent overhead angle, same workshop, same lighting - feed-as-brand.

Do / Don't

- Do: caption every step. Moto audiences watch with sound off in the garage.
- Do: real bikes only. Stock motorcycle footage is identifiable in 2 seconds by riders.
- Do: link in caption + bio. Faceless moto accounts have lower CTR per view, every touchpoint counts.
- Do: keep ambient garage sound (impact gun, exhaust). It reads as honest workshop, not as production.
- Don't: use unfocused trending audio. Moto audiences mute aesthetic-pop instantly.
- Don't: skip the actual work shot. Pure screen-rec without bike B-roll feels disconnected.

6. Audience fit

Works well for

- ADV / touring vloggers (Itchy Boots style, 50k-500k).
- Garage-vlog channels (5k-100k, very high engagement).
- Build-thread Instagram pages (10k-100k, audience converts on documentation angle).
- Cafe-racer / custom-builder accounts (5k-50k, restomod scene).
- Oil-change / maintenance tutorial creators (TikTok + YouTube).
- MotoVloggers (helmet-cam style, larger audiences but harder to convert).

Works poorly for

- Sportbike-stunt content (different audience, doesn't care about maintenance).
- Lifestyle moto-aesthetic (Bolt, vintage-aesthetic accounts) without actual riding.
- Non-rider creators - moto audience detects performative content in 2 seconds.

7. Posting cadence + best times

Moto audience: highest engagement Saturday morning 9-11h local time (pre-ride scroll) and Tuesday evening 19-21h local (post-work garage time). ADV / touring: any day, ride-day content peaks. MotoVloggers: Sunday evening recap content. Frequency: 1 reel per week is plenty in this niche. Build-thread content posts in arcs, not isolated reels - multi-post audiences convert better on the 3rd or 4th installment than the first.

8. Conversion math (why this pays)

50% rev share, 24 months per attributed user. Premium 3.99 USD/m or 24.99 USD/y. ADV micro (40k followers, 1 reel): 25,000 views x 2% CTR = 500 clicks, 35% install = 175 installs, 6% Premium = 11 subs, 12 months x 24.99 USD x 50% = ~140 USD per reel. Garage-vlog mid-tier (80k YouTube, 1 video): 30,000 views x 3% CTR = 900 clicks, 30% install = 270 installs, 7% Premium = 19 subs, ~240 USD per video (YouTube CTR higher than TikTok in moto). Build-thread macro (200k IG, multi-post arc 6 posts): cumulative reach 600,000 x 1% CTR = 6,000 clicks, 25% install = 1,500 installs, 5% Premium = 75 subs over 6-month arc, ~940 USD. Moto subs renew at unusually high rates because riders set-and-forget tools they actually use - 24-month attribution often pays out fully.

9. Tracking summary (full walkthrough in the Extended Brief)

Your link [throttleup.app/i/\[yourhandle\]](https://throttleup.app/i/[yourhandle]) works on every platform. iOS warm uses Universal Link (deterministic). iOS cold (~99% of creator traffic, given iOS-first) uses our DIY signed-token clipboard deferred-deeplink, live-verified, no Branch.io. RevenueCat fires on Premium purchase, 50% credited to your handle for 24 months from each user's first paid month. 30-day refund holdback. Android attribution via Google install-referrer is built and tested, activates once the RC Android key is set. Full walkthrough in the Extended Brief PDF.

10. Onboarding (5 minutes)

- Click the personal link from Mail 2 (valid 7 days).
- Land on [throttleup.app/affiliate/\[your-token\]](https://throttleup.app/affiliate/[your-token]).
- Fill in: handle, Wise payout details, country (tax docs), billing address.
- Get your personal tracking link by mail + dashboard unlock.
- Free Lifetime Premium activated on your ThrottleUp account.

11. Dashboard (what you see)

- Live at getklar.org/dashboard (magic-link login).
- Clicks, installs (iOS warm / iOS cold; Android paused indicator), active Premium subs in your bucket.
- Claimable USD + paid USD + next payout date.
- Refund-holdback pipeline + per-app earnings funnel.

12. Brand assets (download)

Logo, app screenshots, VIN-scan demo footage, garage workflow B-roll, colour palette and ready-made captions: getklar.org/i/throttleup/brand-assets (link goes live with your onboarding mail).

13. FAQ

Does NHTSA cover European bikes?

vPIC and Recalls data is US-focused. European riders still benefit from VIN decode (works for most major manufacturers) but recall data is US-centric. For European-specific recalls, riders should still check their national agency. We're working on EU equivalents but no ETA.

What about Android?

Android is built and tested but paused at the RC Android key step. Your link still works for Android users - they hit a waitlist page. Once Android relaunches, attribution applies retroactively to waitlisters.

Can I post videos in non-English?

Yes. The app is English-only currently but the affiliate audience is global. German garage-vlog, French ADV, Italian cafe-racer all welcome.

Flat fee on top?

Yes. Moto channels are smaller than mainstream but command higher per-view rates because of niche-trust. Mid-tier 150-500 USD per post, macros 500-1500 USD. Rev share stays on top.

What about the trip-sharing / privacy-cropped routes feature?

The trip-sharing feature is in the app but in beta. Don't lead with it in marketing yet - focus on VIN scan, recall alerts, and multi-bike.

Disclosure?

Yes. Rev-share = paid recommendation. #ad / #sponsored / IG "Paid Partnership". Moto audiences are forgiving of honest disclosure but unforgiving of hidden ads.

14. One last thing

Honest read: ThrottleUp fits creators with a real bike, real garage, and real maintenance content. If you're a lifestyle moto-aesthetic account that doesn't actually wrench, this is not a fit. The audience detects performance instantly and your credibility takes the hit. We'd rather have 10 well-fit wrenchers than 100 random posts. Reply to Mail 2 either way - yes, no, or 'I want to see if the audience actually buys'. A 15-minute call goes a long way.

On posts with affiliate link: #ad / #sponsored / Paid Partnership (FTC, EU disclosure law).
