

MyLoo

Privacy-first digestion tracker with AI Bristol classification and 30-day clinic export.

What it is

MyLoo is a digestion and stool tracker for iOS (Android launch on hold due to Google's Health Policy 2026). Photo of the sample, Claude Vision AI classifies on the Bristol Stool Scale 1-7, plus volume / texture / blood / mucus flags. Privacy-first: photos are NOT stored on our side, only the structured result lives in the timeline. The timeline carries symptom tags (bloating, cramps, urgency, pain level), and the user exports a clean 30-day PDF for their GI appointment.

Who it is for

Adults dealing with IBS, IBD, gut sensitivities, food intolerances, post-surgical follow-up. Plus parents tracking toddler health (adult-audience targeting only for now), and chronic-condition patients.

Key features

- Photo-to-Bristol AI classification: Vision model returns Bristol 1-7 + volume / texture / blood / mucus flags from a single photo.
- Privacy-first photo handling: image is processed in the Vision call and not persisted on Klar infrastructure.
- Symptom tags timeline: bloating, cramps, urgency, pain level, cross-tagged with food entries.
- 30-day clinic PDF export: handed to GI at appointment, replaces 4 weeks of retrospective recall.
- Discreet clinical UI: deliberately calm, not the wellness-influencer aesthetic.

Business model

- Single revenue stream: recurring Premium subscription.
- Pricing: 4.99 USD / month or 29.99 USD / year.
- Free tier: manual Bristol entry + tags, timeline, manual PDF export.
- Premium unlocks: AI photo classification, email-inbound scanning, extended clinic export mode.
- Platform: iOS only currently. Android paused - Google Health Policy 2026 requires registered org + D-U-N-S.

Affiliate compensation

- 50% of net Premium subscription revenue for 24 months from each attributed user's first paid month.
- 30-day refund holdback before payout becomes claimable (Apple / Google refund window).
- 50 EUR minimum payout, monthly, via Wise.
- Free Lifetime Premium for onboarded affiliates (no posting obligation).
- Per-handle dashboard with live click / install / sub / earning split, no agency layer.

How tracking works (one paragraph)

Your link [myloo.org/i/\[handle\]](https://myloo.org/i/[handle]) works on every platform. iOS warm installs use Universal Links. iOS cold (~99% of creator traffic, given iOS-only) uses our own signed-token clipboard deferred-deeplink - live-verified, no Branch.io. RevenueCat fires when Premium is purchased and 50% of net revenue is credited to your handle for 24 months from each user's first paid month. Android attribution will activate via Google install-referrer once Android relaunches.

For the full attribution walkthrough, the Google Health Policy context for Android pause, and how the privacy-first photo handling actually works, see the Extended Brief PDF in this folder.
