

ThrottleUp

VIN-scan motorcycle maintenance tracker with live NHTSA recall alerts and multi-bike support.

What it is

ThrottleUp is an iOS + Android app for motorcycle maintenance tracking. The VIN scanner pulls make / model / year / engine class live from NHTSA vPIC. Recall integration runs against the NHTSA Recalls API. Service intervals are set per bike (mileage + time based), push reminders fire 30 / 7 / 1 day before due. Multi-bike for the 2+-bike garage. Plus: maintenance log with photo attachments, PDF / CSV export, and anonymous public trip-sharing with privacy-cropped routes.

Who it is for

Wrenchers, project-bike owners, custom builders, daily-driver tuners. Audience skews 20-55, ~95% male, deep European motorcycle community plus US restomod scene.

Key features

- VIN scanner: make / model / year / engine class pulled live from NHTSA vPIC database.
- Recall integration: live lookup against NHTSA Recalls API, push notification when a recall drops for a registered bike.
- Service interval reminders: per-bike, mileage + time based, push 30 / 7 / 1 day before due.
- Maintenance log with photo attachments: every entry carries vendor receipt + install photo.
- Multi-bike (Premium): unlimited bikes + larger riding groups.

Business model

- Single revenue stream: recurring Premium subscription.
- Pricing: 3.99 USD / month or 24.99 USD / year.
- Free tier deliberately generous: 1 bike, 1 riding group up to 4 members, unlimited entries, VIN decode, recall lookup, PDF / CSV export.
- Premium unlocks: unlimited bikes, larger / more riding groups.

Affiliate compensation

- 50% of net Premium subscription revenue for 24 months from each attributed user's first paid month.
- 30-day refund holdback before payout becomes claimable (Apple / Google refund window).
- 50 EUR minimum payout, monthly, via Wise.
- Free Lifetime Premium for onboarded affiliates (no posting obligation).
- Per-handle dashboard with live click / install / sub / earning split, no agency layer.

How tracking works (one paragraph)

Your link `throttleup.app/i/[handle]` works on every platform. iOS warm installs use Universal Links. iOS cold (~99% of creator traffic) uses our own signed-token clipboard deferred-deeplink - live-verified, no Branch.io. RevenueCat fires when Premium is purchased and 50% of net revenue is credited to your handle for 24 months from each user's first paid month. Android attribution will activate via Google install-referrer once the RC Android key is set.

For the full attribution walkthrough plus the why-DIY reasoning, the NHTSA integration architecture, and the Android-status detail, see the Extended Brief PDF in this folder.
