MyLoo

MyLoo: Affiliate Playbook

As of May 2026 — for patient advocates and gut-health creators

Subtitle: "Photo in, AI classifies, clinic PDF out. Privacy-first. Earn from the value you already create."

1. App in 60 seconds + business model

MyLoo is a digestion/stool tracker for iOS+Android (Android launch on hold due to Google's Health Policy 2026). Photo of the sample, Claude Vision AI classifies on the Bristol Stool Scale 1-7, plus volume/texture/blood/mucus flags. Privacy-first: photos are NOT stored on our side, only the structured result lives in your timeline. The timeline carries symptom tags (bloating, cramps, urgency, pain level), you export a clean 30-day PDF for your GI appointment.

Why this works: word-doc tracking is the reality for 80% of IBS patients. MyLoo solves exactly that problem: at the GI appointment you no longer talk retrospectively for 4 weeks, you show a PDF with real data.

Free vs Premium:

- **Free:** manual entry (Bristol picker + tags), timeline, manual PDF export
- **Premium (4.99 USD/month or 29.99 USD/year):** AI photo classification + email inbound scanning + extended clinic export mode
- **Email scanning mode:** off / warranty-only / all — controls what MyLoo automatically parses from your mail inbox

Market: IBS/IBD patients worldwide, gut-health enthusiasts, quantified-self crowd. Plus DACH-specific (#reizdarm, #darmgesundheit). US + UK + DACH primarily.

Live status: iOS in Apple review (expected through within days). Android paused due to Google Health Policy update early 2026 (org account + D-U-N-S verification now mandatory).

2. Tracking + attribution architecture

Your link: [myloo.org/i/\[yourhandle\]](https://myloo.org/i/[yourhandle]) (works on IG bio, TikTok bio, story sticker, carousel caption)

3 tracking paths:

1. **Android (install referrer):** Google Play install referrer passes your handle natively to the app. Deterministic. 2. **iOS warm (Universal Link):** app already installed -> link opens the app with your handle. Deterministic. 3. **iOS cold (~99% of creator traffic):** landing page writes signed token to clipboard, app reads on first start. End-to-end verified via sister app On Wavelength.

Add-on for MyLoo (privacy-sensitive): on first app open the user sees a gentle "Invited by @[yourhandle]? Yes / No" one-tap confirmer. Consent over silent attribution. No downside for you — most confirm immediately.

Conversion flow: click -> landing -> App Store -> install -> first-open + confirmer yes -> Premium purchase via RevenueCat webhook -> 50% credited for 24 months.

Payout:

- 30-day refund holdback
- Monthly via Wise / PayPal / SEPA
- Minimum 50 EUR (otherwise carry-over)

3. Marketing strategy A: faceless content

When you want to use privacy + anonymity deliberately. MyLoo is sensitive pain — faceless is often what the audience values.

Hook 1: screen-recording only "From Word doc to clinic PDF in 2 minutes"

- 30s, app screen only
- Scroll timeline -> photo add -> AI classification -> export PDF preview
- Voiceover (TTS or your own voice) over the workflow

Hook 2: animation Bristol scale 1-7

- 15s animation of the Bristol scale (e.g. in Canva or After Effects)
- Ends with "the test your GI would do in 30 seconds, you do it daily, the GI sees 30 days of data"

Hook 3: voiceover over stock footage of gut health

- 45s, stock footage stomach pain / belly / calendar
- Voiceover (no face): "I've had IBS for 8 years. Here's what changed my GI appointments."
- Cut to app screen clinic PDF

Hook 4: comparison slide "What you did before MyLoo"

- Split-screen: left word-doc chaos / handwritten notebook / nothing. Right MyLoo timeline.
- 8s loop, trending sound

Hook 5: patient-journey storyboard (anonymised)

- Carousel or TikTok slideshow, no face
- Slide 1: "Day 1 with new diet" (notes pic)
- Slide 2: "Day 14, GI appointment coming" (stress pic)

- Slide 3: "Day 30, MyLoo export ready" (PDF screenshot)
- Slide 4: "Appointment: 4 min instead of 25" (stopwatch)

Faceless advantage: sensitive niche -> audience rewards privacy respect. You can do a compilation format without your face being visible.

4. Marketing strategy B: UGC / your voice

When you are a patient advocate with built trust. Authenticity matters more here than anywhere else.

Hook 1: "Day in my life with IBS" format with MyLoo integration

- 60s, selfie-mode vlog (morning, noon, evening)
- MyLoo as a 5-second beat 1x: "track quickly, move on"
- Natural integration

Hook 2: "Before my GI appointment I do this"

- 45s, you in selfie mode + cuts to app export PDF
- "I no longer tell the GI 30 minutes of 'how I feel' — they get the PDF and we talk solutions instead of stories"

Hook 3: personal diagnosis story

- 90s, you tell your own IBS/IBD diagnosis story
- MyLoo comes in at the end as "what would have helped me, what I use now"
- High-trust format, don't over-pitch

Hook 4: patient-advocate Q&A format

- Story series or reel series
- "5 questions I got from my DM audience about MyLoo"
- Answered honestly + affiliate link in bio/story sticker

Hook 5: co-creation with another patient advocate

- Duet format on TikTok, or carousel co-posting on IG
- Both use the app, both have the link in bio
- Amplifies reach + trust

UGC advantage: conversion much higher than faceless, because trust + patient-advocate authority are paired. Posting frequency lower (1 reel/week is enough), conversion per post higher.

5. Creator pool in your niche

Top-fit subniches:

Niche	Platform	Size	Conversion
Patient advocates IBS/IBD	IG	10k-80k	very high (pain real, trust high)
Patient advocates DACH (#reizdarm)	IG/TikTok	5k-50k	high (smaller market, higher reply)
Low-FODMAP recipe creators	IG/TikTok	30k-200k	high
#ibstok TikTok creators	TikTok	50k-500k	medium-high
MDs/RDs (gut-health authority)	IG	50k-700k	medium (slower decisions, PR route)
Spoonie community (#invisibleillness)	IG	10k-100k	high (loyal)

Anchor creators (reference):

- **Bethany Ugarte** @lilsipper — US ~250k, IBS recipes
- **Hannah Aylward** @hannahaylward — Crohn's + functional medicine
- **Tamara Duker Freuman RD** @tamaraduker — IBS-RD NYC
- **Kate Scarlata RDN** @katescarlata — low-FODMAP pioneer

(Big-authority names like Megan Rossi @theguthealthdoctor, Will Bulsiewicz @theguthealthmd typically need PR-agency route.)

Hashtags: TikTok: #ibstok #ibsproblems #ibsdiet #lowfodmap #fodmap #guthealth #guttok #crohnsdisease #colitis #ibd #chronicillness #spoonie #invisibleillness #reizdarm

IG: #ibsfighter #ibslife #lowfodmapdiet #fodmap #guthealthmatters #crohnswarrior #colitiswarrior #ibdcommunity #bristolstoolchart #darmgesundheit

Power move: patient advocates who post MyLoo demo content themselves reach their own engaged audience (high trust). Paid macro influencers without patient angle = low conversion.

6. Conversion math (example calculations)

Micro patient advocate (15k IG, 1 reel):

- Views: 8,000
- CTR: 1.8% = 144 clicks
- Install: 35% = 50 installs
- Premium conv: 8% = 4 subs
- 14 months × 4.99 USD × 50% = **~140 USD per reel**

Mid-tier patient advocate (80k, 1 reel):

- Views: 40,000
- CTR: 1.5% = 600 clicks
- Install: 30% = 180 installs
- Premium conv: 8% = 14 subs
- 14 months $\times$ 4.99 $\times$ 50% = **~490 USD per reel**

MD/RD endorsement (300k, 1 carousel):

- Reach: 100,000
- CTR: 0.8% = 800 clicks
- Install: 25% = 200 installs
- Premium conv: 9% = 18 subs
- 14 months $\times$ 4.99 $\times$ 50% = **~625 USD per post**

Reizdarm/IBS apps have above-average conversion to Premium because the alternative "Word doc" is so bad.

7. Onboarding + payout (5 minutes)

Mail 2 contains your **personal onboarding link** (valid 7 days). Click -> [myloo.org/affiliate/\[token\]](https://myloo.org/affiliate/[token]) -> choose pay method -> activate Free Lifetime Premium. Dashboard on [getklar.org/admin/affiliate/\[handle\]](https://getklar.org/admin/affiliate/[handle]) via magic link.

Dashboard shows: clicks/installs/subs/payable/carry-over/refund pipeline in real time.

8. FAQ + compliance

"Privacy-first — can I honestly say this?" Yes. Photos are NOT stored on our side. Only the structured result (Bristol classification, tags) lives in the timeline. Edge function in Frankfurt, photo is processed during the Vision call and not persisted.

"Medical claims?" NEVER. MyLoo is a tracking tool, not a diagnostic device. Not "the app diagnoses IBS" but "the app helps you track symptoms structurally for GI conversations". Violation = legal risk for you and us.

"Disclosure duty?" Yes. Rev-share = paid recommendation. #ad / #sponsored / IG "Paid Partnership". DACH: UWG §5a disclosure mandatory.

"Can I get a flat fee on top?" Mid+ yes, 200-500 USD per reel negotiable. Book the 15-minute intro call.

"Can I also mention MyLoo for kids/babies?" Not currently — children's health is V2 phase, different compliance requirements. Please target adult audiences only.

MyLoo is operated by Alain Kessler (CH, sole proprietorship). MyLoo is a tracking tool, not a diagnostic device. The affiliate program is a direct agreement between you and me. Questions to alainkessler04@gmail.com.
